PROFILE

Software Developer with hands-on experience in Python, Machine Learning, Computer Vision, Generative AI concepts, and software development through academic projects. Skilled in data preprocessing, machine learning workflows, data analysis, debugging, and version control using Git and GitHub. Experienced in developing intelligent applications using Scikit-learn, PyTorch, OpenCV, and YOLOv8, with familiarity in SDLC concepts, and model evaluation. Strong analytical thinker with a passion for continuous learning, problem-solving, and building AI-driven solutions to real-world challenges.

EDUCATION

MCA Government Engineering College , Thrissur CGPA : 8.49	2024 – 2026 Thrissur , India
--	---------------------------------

BSc Physics Sreekrishna College , Guruvayur CGPA : 7.21	2021 – 2024 Guruvayur , India
--	----------------------------------

TECHNICAL SKILLS

- Programming Languages: Python, Java
- Web Technologies & Frameworks: HTML, CSS
- Version Control : Git, GitHub
- Database : MySQL, MongoDB
- AI / Machine Learning: YOLOv8, OpenCV, PyTorch, Scikit-learn
- Data Science & Analytics: NumPy, Pandas, Matplotlib, Exploratory Data Analysis, Data Preprocessing, Model Evaluation

PROJECTS

Green VEICART: AI & IoT-Based Smart Checkout System for Fruits and Vegetables

- Designed and implemented a modular real-time billing system integrating YOLOv8-based object detection, IoT sensor data, and database management.
- Integrated ESP32 and HX711 sensors for real-time weight measurement and automated price calculation.
- Implemented backend processing and transaction management using Python and SQLite.
- Developed a Streamlit-based user interface for displaying predictions and managing QR-based payment processing.
- Improved billing accuracy and checkout efficiency using computer vision and automation.

MetaPrep – AI-Driven Adaptive Data Preprocessing Framework

- Built an AI-driven framework for automated dataset profiling and preprocessing.
- Used a hybrid approach combining rule-based logic and model-assisted prediction for preprocessing selection.
- Designed a Data Quality Index (DQI) to evaluate data quality before and after processing.
- Applied OpenCV techniques for image enhancement, including noise reduction and contrast improvement.
